

Crop Insurance Schemes (PMFBY)

Turning Farming Risk into Managed Risk

DEEPIKA H E , AMB2055

March 25, 2026

Story

Meet Ramesh, a farmer . He works hard all year, but nature says: "Plot twist!" PMFBY is his financial raincoat .

Problem Statement

- Climate risks: drought, flood, cyclone
- Pest attacks and diseases
- Income instability
- No guaranteed returns

Analogy

Farming is like writing an exam where the questions keep changing

- Compare insured vs non-insured farmers
- Study PMFBY impact (before and after 2016)
- Analyze crop loss and compensation
- Use surveys and government reports

Story Insight

Who carried an umbrella and who trusted luck?

Data Description

- Farmer demographics
- Crop yield data
- Weather data (rainfall, temperature)
- PMFBY claims and enrollment data

Analogy

Weather = teacher, Crop = student, PMFBY = re-evaluation system

- Risk prediction models
- Statistical comparison (loss vs compensation)
- Machine learning for yield prediction
- Use of satellite and drone data

Story Insight

Will Ramesh celebrate harvest or check insurance status?

- Reduced financial stress for farmers
- Faster recovery after crop loss
- Low premium rates:
 - 2% Kharif
 - 1.5% Rabi
 - 5% Commercial crops
- Challenges: delays, low awareness

Analogy

Like a seatbelt — you hope not to use it, but it saves you!

Conclusion

- PMFBY improves financial stability
- Reduces farming risk
- Needs faster claim processing
- Future: AI + real-time monitoring

Story

Insurance doesn't stop the storm But it ensures Ramesh doesn't lose everything.

Thank You!

Question

If you were Ramesh, would you take the risk or insurance?
